

Concept

LinkSens is a modular wearable control system designed around different body shapes and natural movement.

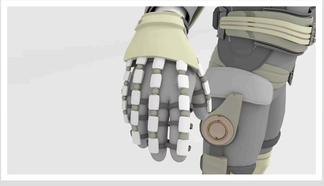

Early Sketches

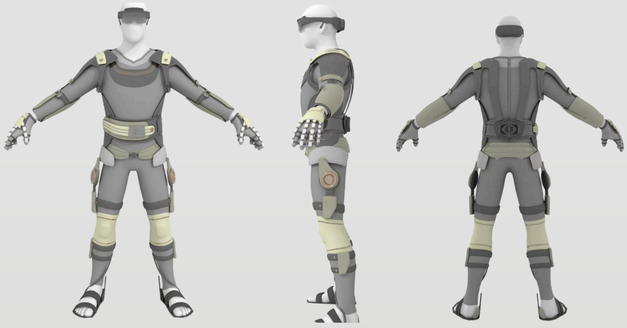

Iterative sketches for preliminary wearable form exploration.

①

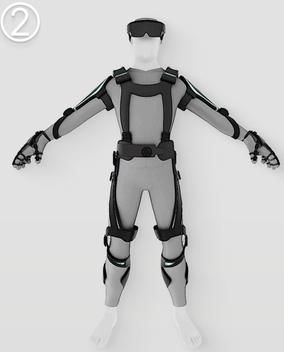

V1 modeling

Bulky appearance and difficult to wear. The form lacks smoothness, premium texture and a high-end feel, with unsatisfactory color matching.

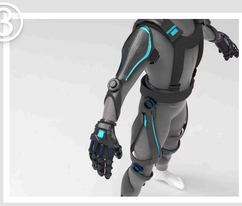

②

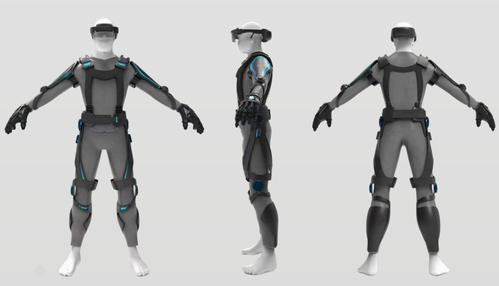

③

V2 & V3 modeling

V2: Easier to wear, poor color scheme & over-rounded edges
V3: Fixed colors, weak details
